

Cloud Migrations_

Zencore is your trusted advisor for simple or complex Migrations

Trusted advisors embed with your team to enable a “build with” model.

Adopting a new cloud platform can help accelerate your organization’s technical capabilities, but it requires a new way of thinking about your software, infrastructure, and teams.

Discovery and Assessment

We actively participate in reviewing your goals, technology, and existing processes. Rather than just give you an automated readout from a scanner, we take the time with you to do a thoughtful review.

Cloud Migration Planning

Based on the discovery input, we develop a comprehensive plan to get you to the cloud. Service by service, application by application.

Cloud Migration Execution

Our experts work hand in hand with your teams to execute your cloud migration plan. Whether you are doing a simple lift and shift or a full transformation, we have the experience needed to guarantee your success.

Methodology Created by Former Google Cloud Architects

We work with you to determine the right migration strategy, roadmap and cloud native operating model. Leveraging our years of experience working with teams as they adopt cloud native technology and tooling, we will ensure the successful evolution of your technology infrastructure. Our proven cloud migration framework has been developed by seasoned technologists based on their real world experience executing successful cloud migrations.
